## Wireless Telephony & Intercom system for your Business

### Impress your Customer

Stay connected with your customers throughout every area of your business premises. Transform every space as a point of contact and point of sales to enhance customer experience. Generate more business and build more loyal customers by being accessible to assist customers anytime and anywhere in your area.

### What is WiFi Air PBX?

Introducing a new, easy-to-deploy telephony and intercom system designed for any business location. Leveraging local WiFi coverage, it provides voice connectivity to any connected mobile device within the WiFi network. This seamless telephony solution requires no dialing of numbers or app installation, operating entirely within the WiFi perimeter. Business telephone destinations are assigned unique QR codes or URL links, allowing

customers to contact them directly from their mobile phones without the need to download any additional apps. For enhanced service and location-based functionalities, customers can register on the portal during their first interaction.

### Other Features

Multi lingual AI assistant and trainable, location based service for emergency, Map dialing, Payment integration, 3rd Party API integration, Voice command to SMS, Voice command to Email, Custom Call Portal, Custom Greetings, direct to Phone, direct to legacy PBX and more.
